

Brydge Solutions

Moving Rare Disease Research Forward

Advocacy organizations have taken a bold step forward by directly driving drug development programs. Drug development is difficult, and many groups come upon unforeseen challenges. For any patient group dedicated to moving research forward, Brydge Solutions provides rare disease communities with expertise that reduces inefficiencies in translating new therapeutics from bench-to- bedside, increases preclinical productivity, accelerates the path to clinical trial, and reduces program development costs.

Comprehensive Partner Engagement

Research and Gap Analysis

Evaluation of the scientific landscape and resources needed to advance programs; Prioritization of activities

Roadmap Analysis

Assessment of development plans and opportunities; Operational guidance: timelines, costs, risks, and resourcing

Pipeline Execution

Essential insight on regulatory strategy, scientific oversight, manufacturing and other areas. Oversight of execution through collaborators or partners

Expertise and Guidance for Your Research Programs

Odylia partners with rare disease communities to deliver a new generation of innovative therapies for rare diseases. By identifying a team of researchers, clinicians, contract research organizations (CROs), industry partners, and philanthropic donors who can best help plan and execute a successful program, Odylia helps advocacy organizations overcome obstacles and achieve their unique goals. Together, we can make research and drug development work for patients, not for profits.
